Prospecting for placer gold, except perhaps in the case of buried placers, is the simplest form of prospecting. Gold, platinum, and tin are the principal metallic minerals won from placers, but gold (alloyed with varying percentages of silver) is the only metal that has been recovered in commercially important quantities from placers in the United States.

Prospecting Placer Gold Deposits

Prospectors in Connecticut may also want to investigate nearby states such as Vermont and Maine, which are not too far away, but may be worth the effort to try and find richer gold bearing areas. As always, be respectful of private property rights. Ask permission before doing any prospecting on private lands, and follow the rules and regulations for mining in whichever state you mine in.

Geology of Placer Deposits, Part 1 Reading a River

Gold bearing placer streams in Colorado are generally many thousands of years old, sometimes millions of years old. In that much time, a stream can move around and erode much deeper into a valley. As this happens, cobble deposits containing gold can be orphaned, or left behind, by the flowing water.
